Write one requirement of each of the four types studied (functional, non-functional, data and environment) for each of the following systems

a. <u>Amazon website</u>

Functional: sells products online

Non-Functional: availability in most of countries

Data: saves your wish list

Environment: accepts debit/credit cards of banks in the country it is supported in

b. <u>Zoom application</u>

Functional: allows video/audio calls

Non-Functional: allows different call quality to save internet consumption

Data: it allows privacy of the call

Environment: it does not need an excellent internet. It works on 3G so it works in any country

c. <u>Pokemon Go mobile game</u>

Functional: Challenging

Non-Functional: scalable

Data: accuracy of data

Environment: it does not need an excellent internet. It works on 3G so it works in any country
